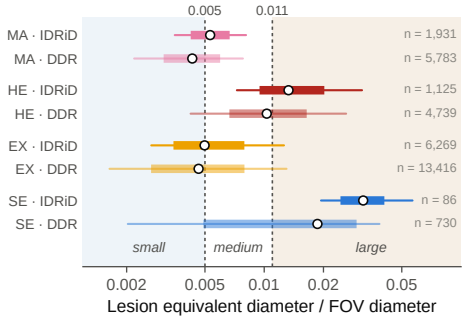
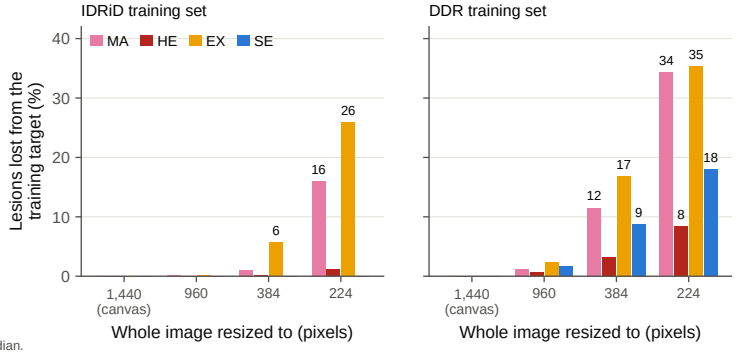
a Lesion size by class



Training images only (IDRiD 44, DDR 383). Bar, quartiles; line, 10th–90th percentile; dot, median.

b Lesions that vanish when the image is shrunk



c Lesion-level recall by size

Trained on IDRiD — recall by lesion size

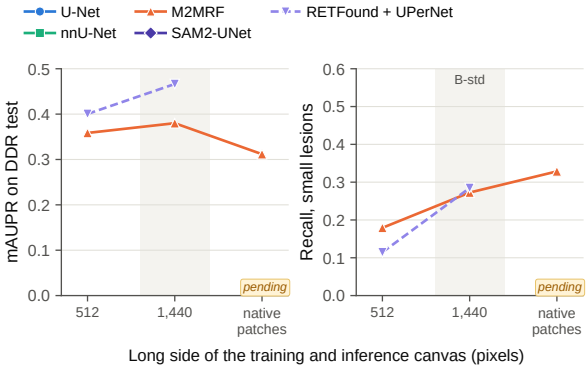
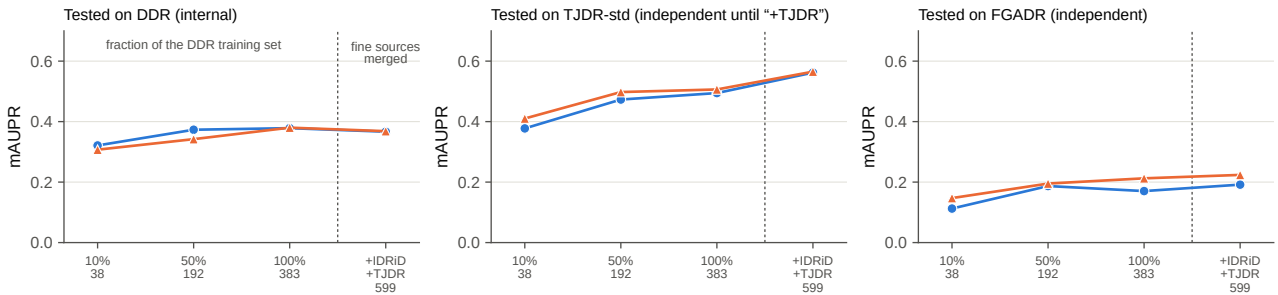
MedSAM row simulated

d Input resolution



e Training amount and merged sources



Second line: number of training images. Every setting uses the same number of image passes; U-Net and M2MRF, seed 0.
